Most simply put, economics is the study of human choice. It studies how individuals and societies seek to satisfy their needs and wants through incentives, choices, and allocation of scarce resources. The need for economics arises because resources around the world are scarce while human wants are unlimited.

Studying economics gives you not just a good starting point for your career but also a whole new perspective on everyday life. Economic theory can be used to understand a range of both individual and social problems. Economics education gives you broad intellectual training, providing you with the foundations of knowledge of how the economy works as well as the ability to apply that knowledge in a constructive manner.

Possible Career Options
