

Accounting entails examining, organizing, recording and reporting of financial and business transactions, in addition to analyzing the reported information in order to help organizations make sound business decisions. Diving into the study of accountancy teaches students to investigate and communicate information about financial matters. It also prepares graduates for management careers in accounting, financial management and consulting in business and government. A graduate in accounting has the skills needed to show the progress or failures of a business, as well as its future limitations and possibilities. The Bachelor of Science in Business Administration Major in Accounting at AUS prepares students for professional certificate examinations such as CPA, CMA, CIA and CFE.
